

virtual 
intercom
by TLJ

no monitors
no calling panels
no cabling
no network

How does it work?

Virtual Interom

Now

You have a visitor, swipe to answer the call

Virtual Intercom

Now

The resident has released the door lock, come inside!

Stacked

With

Functionality

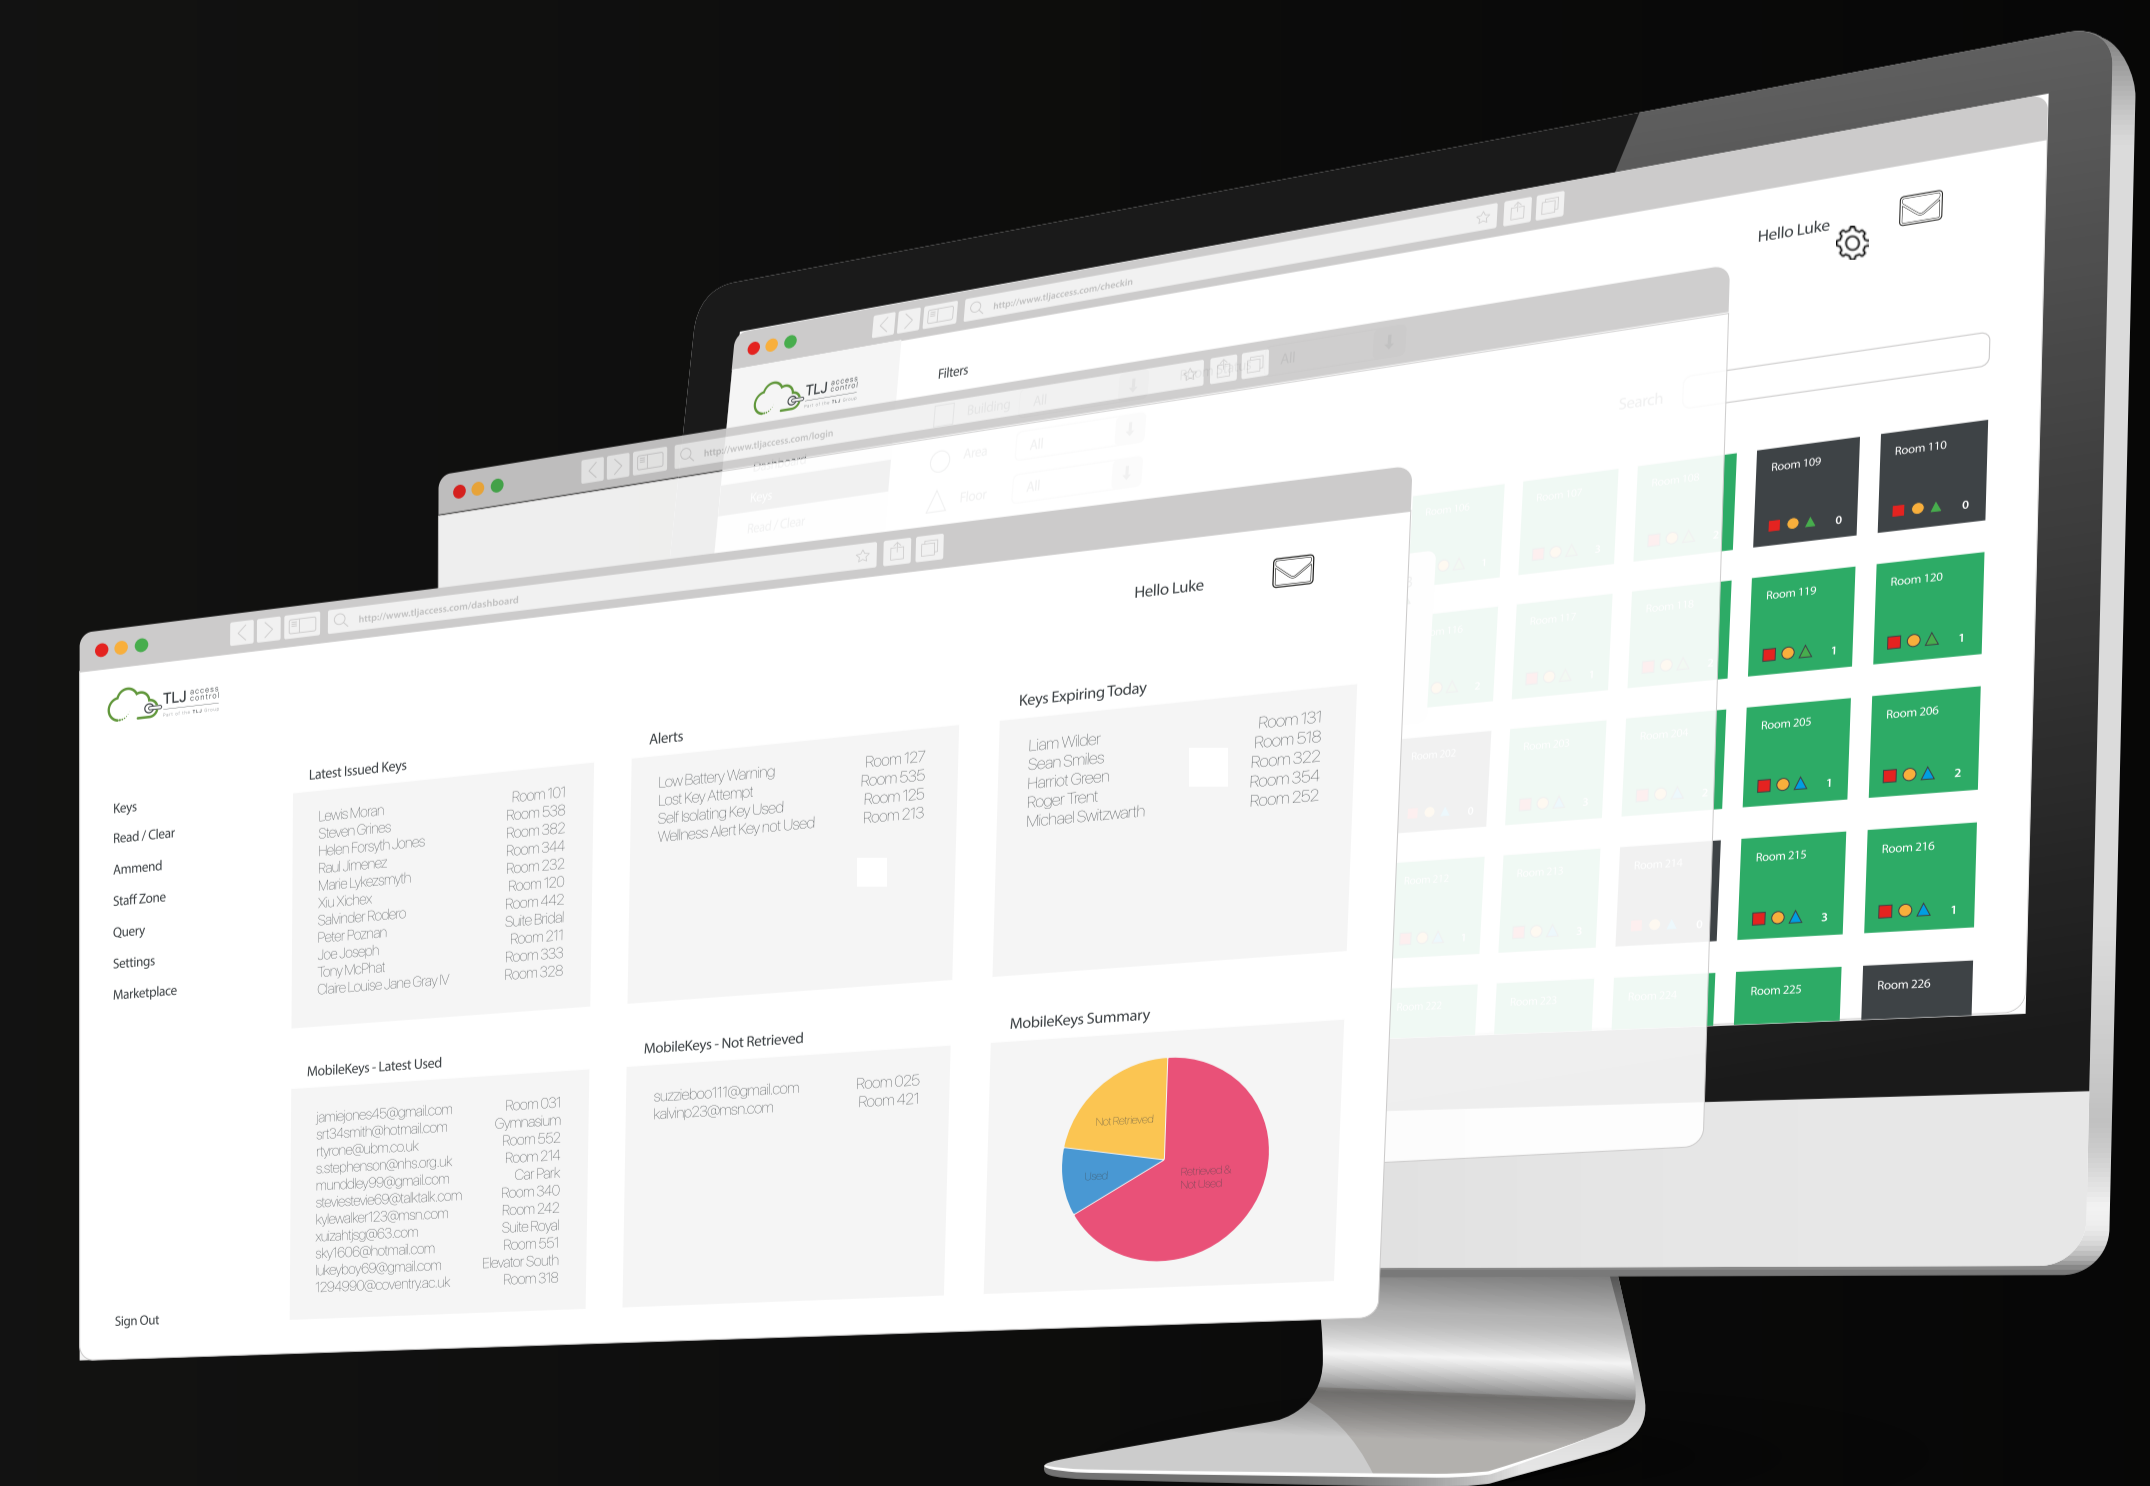

- Know who is calling before answering
- Bi-directional message board
- No names, emails or phone numbers are shown to the visitor
- Internal calling with neighbours
- Visitor location displayed within the call, i.e. multiple entrances, same building
- Remote door release from resident phone, if building operator allows

**One way video
Resident can see visitor
Visitor cannot see resident**

Granular Control

- Allow residents to release the door
all residents or specific residents
- Do not disturb mode
- Block internal calls
- Up to four assigned residents per
rental unit
- Complete audit log of all calls,
duration, messages and door
release
- Integration via REST API with PMS
for automatic assigning residents
and move outs
- SDK available for inclusion into
own app
- Retro-fit to virtually any property
without cabling, disruptive works
and substansial capital investment
